Migrate to a two-node switched cluster

Migrate to a two-node switched cluster with Broadcom-supported BES-53248 cluster switches

If you have a two-node switchless cluster, you can migrate, non-disruptively, to a two-node switched cluster that includes Broadcom-supported BES-53248 cluster switches. The documented process works for all cluster node ports using optical or Twinax ports but is not supported on this switch if nodes are using onboard 10GBASE-T RJ45 ports for the cluster network ports.

About this task

Most systems require two dedicated cluster-network ports on each controller.

Ensure that the BES-53248 cluster switch is set up as described in the Switch Setup and Configuration Guide for Broadcom-supported BES-53248 switches guide before starting this migration process.

> ⓘ After your migration completes, you might need to install the required configuration file to support the Cluster Switch Health Monitor (CSHM) for BES-53248 cluster switches.

See Installing the Cluster Switch Health Monitor (CSHM) configuration file in the *Switch Setup and Configuration Guide for Broadcom-supported BES-53248 switches* guide.

Also, see *Configuring the cluster switch log collection feature* in the Switch Setup and Configuration Guide for Broadcom-supported BES-53248 switches for the steps required to enable cluster health switch log collection used for collecting switch-related log files.

Migrate to a switched NetApp cluster environment using Broadcom-supported BES-53248 cluster switches

If you have an existing two-node switchless cluster environment, you can migrate to a two-node switched cluster environment using Broadcom-supported BES-53248 cluster switches to enable you to scale beyond two nodes in the cluster.

What you'll need

Two-node switchless configuration:

- The two-node switchless configuration must be properly set up and functioning.
- The nodes must be running ONTAP 9.5P8 and later. Support for 40/100 GbE cluster ports starts with EFOS firmware version 3.4.4.6 and later.
- All cluster ports must be in the up state.
- All cluster logical interfaces (LIFs) must be in the up state and on their home ports.

Broadcom-supported BES-53248 cluster switch configuration:

- The BES-53248 cluster switch must be fully functional on both switches.
- Both switches must have management network connectivity.

- There must be console access to the cluster switches.
- BES-53248 node-to-node switch and switch-to-switch connections must use Twinax or fiber cables.

  The *NetApp*Hardware Universe contains information about ONTAP compatibility, supported EFOS firmware, and cabling to BES-53248 switches.

  Hardware Universe - Switches

- Inter-Switch Link (ISL) cables must be connected to ports 0/55 and 0/56 on both BES-53248 switches.
- Initial customization of both the BES-53248 switches must be completed. So that the:
    - BES-53248 switches are running the latest version of software
    - BES-53248 switches have optional port licenses installed, if purchased
    - Reference Configuration Files (RCFs) have been applied to the switches

      Any site customization, such as SMTP, SNMP, and SSH must be configured on the new switches.

About this task

The examples in this procedure use the following cluster switch and node nomenclature:

- The names of the BES-53248 switches are `cs1` and `cs2`.
- The names of the cluster SVMs are `node1` and `node2`.
- The names of the LIFs are `node1_clus1` and `node1_clus2` on node 1, and `node2_clus1` and `node2_clus2` on node 2 respectively.
- The `cluster1::*>` prompt indicates the name of the cluster.
- The cluster ports used in this procedure are `e0a` and `e0b`.

  The *Hardware Universe* contains the latest information about the actual cluster ports for your platforms.

  Hardware Universe

Steps

1. If AutoSupport is enabled on this cluster, suppress automatic case creation by invoking an AutoSupport message:

   `system node autosupport invoke -node * -type all -message MAINT=xh`

   where x is the duration of the maintenance window in hours.

   > (i) The AutoSupport message notifies technical support of this maintenance task so that automatic case creation is suppressed during the maintenance window.

   The following command suppresses automatic case creation for two hours:

   ```
   cluster1::*> system node autosupport invoke -node \* -type all -message
   MAINT=2h
   ```

2. Change the privilege level to advanced, entering **y** when prompted to continue:

```
set -privilege advanced
```

The advanced prompt (`*>`) appears.

3. Disable all activated node-facing ports (not ISL ports) on both the new cluster switches cs1 **and** cs2.

> (i) You must not disable the ISL ports.

The following example shows that node-facing ports 1 through 16 are disabled on switch cs1:

```
(cs1)# configure
(cs1)(Config)# interface 0/1-0/16
(cs1)(Interface 0/1-0/16)# shutdown
(cs1)(Interface 0/1-0/16)# exit
(cs1)(Config)# exit
```

4. Verify that the ISL and the physical ports on the ISL between the two BES-53248 switches cs1 and cs2 are up:

```
show port-channel
```

The following example shows that the ISL ports are up on switch cs1:

```
(cs1)# show port-channel 1/1
Local Interface............................... 1/1
Channel Name.................................. Cluster-ISL
Link State.................................... Up
Admin Mode.................................... Enabled
Type.......................................... Dynamic
Port channel Min-links........................ 1
Load Balance Option........................... 7
(Enhanced hashing mode)

Mbr     Device/         Port        Port
Ports   Timeout         Speed       Active
------  -------------   ---------   -------
0/55    actor/long      100G Full   True
        partner/long
0/56    actor/long      100G Full   True
        partner/long
(cs1) #
```

The following example shows that the ISL ports are up on switch cs2 :

```
(cs2)# show port-channel 1/1
Local Interface................................. 1/1
Channel Name.................................... Cluster-ISL
Link State...................................... Up
Admin Mode...................................... Enabled
Type............................................ Dynamic
Port channel Min-links.......................... 1
Load Balance Option............................. 7
(Enhanced hashing mode)

Mbr    Device/        Port       Port
Ports  Timeout        Speed      Active
------ -------------  ---------  -------
0/55   actor/long     100G Full  True
       partner/long
0/56   actor/long     100G Full  True
       partner/long
(cs2) #
```

5. Display the list of neighboring devices:

```
show isdp neighbors
```

This command provides information about the devices that are connected to the system.

The following example lists the neighboring devices on switch cs1:

```
(cs1)# show isdp neighbors

Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge,
                  S - Switch, H - Host, I - IGMP, r - Repeater
Device ID        Intf     Holdtime  Capability   Platform     Port ID
-------------- -------- --------- ------------ ----------- ---------
cs2              0/55     176       R            BES-53248   0/55
cs2              0/56     176       R            BES-53248   0/56
```

The following example lists the neighboring devices on switch cs2:

```
(cs2)# show isdp neighbors

Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge,
                  S - Switch, H - Host, I - IGMP, r - Repeater
Device ID       Intf      Holdtime  Capability   Platform     Port ID
--------------  --------  ---------  ------------  -----------  ---------
cs2             0/55       176        R            BES-53248    0/55
cs2             0/56       176        R            BES-53248    0/56
```

6. Verify that all cluster ports are up:

   `network port show -ipspace Cluster`

   Each port should display up for Link and healthy for Health Status.

```
cluster1::*> network port show -ipspace Cluster

Node: node1

                                                    Speed(Mbps) Health
Port      IPspace       Broadcast Domain Link MTU   Admin/Oper  Status
--------- ------------ ---------------- ---- ---- ----------- --------
e0a       Cluster       Cluster          up   9000  auto/10000 healthy
e0b       Cluster       Cluster          up   9000  auto/10000 healthy

Node: node2

                                                    Speed(Mbps) Health
Port      IPspace       Broadcast Domain Link MTU   Admin/Oper  Status
--------- ------------ ---------------- ---- ---- ----------- --------
e0a       Cluster       Cluster          up   9000  auto/10000 healthy
e0b       Cluster       Cluster          up   9000  auto/10000 healthy

4 entries were displayed.
```

7. Verify that all cluster LIFs are up and operational: `network interface show -vserver Cluster`

   Each cluster LIF should display true for Is Home and have a Status Admin/Oper of up/up

```
cluster1::*> network interface show -vserver Cluster

          Logical      Status       Network                 Current
Current Is
Vserver       Interface  Admin/Oper Address/Mask        Node          Port
Home
----------- ---------- ---------- ----------------- -------------
------- -----
Cluster
          node1_clus1  up/up      169.254.209.69/16  node1          e0a
true
          node1_clus2  up/up      169.254.49.125/16  node1          e0b
true
          node2_clus1  up/up      169.254.47.194/16  node2          e0a
true
          node2_clus2  up/up      169.254.19.183/16  node2          e0b
true
4 entries were displayed.
```

8. Verify that `auto-revert` is enabled on all cluster LIFs: `network interface show -vserver Cluster -fields auto-revert`

```
cluster1::*> network interface show -vserver Cluster -fields auto-revert

          Logical
Vserver    Interface      Auto-revert
--------- ------------- ------------
Cluster
          node1_clus1    true
          node1_clus2    true
          node2_clus1    true
          node2_clus2    true

4 entries were displayed.
```

9. Disconnect the cable from cluster port e0a on node1, and then connect e0a to port 1 on cluster switch cs1, using the appropriate cabling supported by the BES-53248 switches.

   The *NetApp Hardware Universe* contains more information about cabling.

   Hardware Universe - Switches

10. Disconnect the cable from cluster port e0a on node2, and then connect e0a to port 2 on cluster switch cs1, using the appropriate cabling supported by the BES-53248 switches.

11. Enable all node-facing ports on cluster switch cs1.

The following example shows that ports 1 through 16 are enabled on switch cs1:

```
(cs1)# configure
(cs1)(Config)# interface 0/1-0/16
(cs1)(Interface 0/1-0/16)# no shutdown
(cs1)(Interface 0/1-0/16)# exit
(cs1)(Config)# exit
```

12. Verify that all cluster LIFs are up, operational, and display as `true` for `Is Home`:

    `network interface show -vserver Cluster`

    The following example shows that all of the LIFs are up on node1 and node2 and that `Is Home` results are true:

```
cluster1::*> network interface show -vserver Cluster

         Logical      Status     Network               Current     Current
Is
Vserver  Interface    Admin/Oper Address/Mask          Node        Port
Home
-------- ------------ ---------- ------------------- ----------- -------
----
Cluster
         node1_clus1  up/up      169.254.209.69/16   node1         e0a
true
         node1_clus2  up/up      169.254.49.125/16   node1         e0b
true
         node2_clus1  up/up      169.254.47.194/16   node2         e0a
true
         node2_clus2  up/up      169.254.19.183/16   node2         e0b
true

4 entries were displayed.
```

13. Display information about the status of the nodes in the cluster:

    `cluster show`

    The following example displays information about the health and eligibility of the nodes in the cluster:

```
cluster1::*> cluster show

Node                  Health  Eligibility  Epsilon
--------------------  ------- ------------  ------------
node1                 true    true          false
node2                 true    true          false

2 entries were displayed.
```

14. Disconnect the cable from cluster port e0b on node1, and then connect e0b to port 1 on cluster switch cs2, using the appropriate cabling supported by the BES-53248 switches.

15. Disconnect the cable from cluster port e0b on node2, and then connect e0b to port 2 on cluster switch cs2, using the appropriate cabling supported by the BES-53248 switches.

16. Enable all node-facing ports on cluster switch cs2.

    The following example shows that ports 1 through 16 are enabled on switch cs2:

```
(cs2)# configure
(cs2)(Config)# interface 0/1-0/16
(cs2)(Interface 0/1-0/16)# no shutdown
(cs2)(Interface 0/1-0/16)# exit
(cs2)(Config)# exit
```

17. Verify that all cluster ports are up:

    `network port show -ipspace Cluster`

    The following example shows that all of the cluster ports are up on node1 and node2:

```
cluster1::*> network port show -ipspace Cluster

Node: node1

Ignore

false

4 entries were displayed.
```

18. Verify that all interfaces display true for Is Home:

    network interface show -vserver Cluster

    (i)   This might take several minutes to complete.

    The following example shows that all LIFs are up on node1 and node2 and that Is Home results are true:

```
cluster1::*> network interface show -vserver Cluster

          Logical        Status       Network                    Current      Current
Is
Vserver   Interface      Admin/Oper Address/Mask        Node        Port
Home
--------- ------------ ---------- ------------------ ---------- -------

true
          node1_clus2  up/up       169.254.49.125/16  node1       e0b
true
          node2_clus1  up/up       169.254.47.194/16  node2       e0a
true
          node2_clus2  up/up       169.254.19.183/16  node2       e0b
true

4 entries were displayed.
```

19. Verify that both nodes each have one connection to each switch:

```
show isdp neighbors
```

The following example shows the appropriate results for both switches:

```
(cs1)# show isdp neighbors

Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge,
                  S - Switch, H - Host, I - IGMP, r - Repeater
Device ID       Intf          Holdtime  Capability   Platform -- Port ID
--------------  -----------  ---------  -----------  -----------
----------
node1           0/1            175       H            FAS2750     e0a
node2           0/2            157       H            FAS2750     e0a
cs2             0/55           178       R            BES-53248   0/55
cs2             0/56           178       R            BES-53248   0/56

(cs2)# show isdp neighbors

Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge,
                  S - Switch, H - Host, I - IGMP, r - Repeater
Device ID       Intf          Holdtime  Capability   Platform     Port ID
--------------  -----------  ---------  -----------  -----------
------------
node1           0/1            137       H            FAS2750     e0b
node2           0/2            179       H            FAS2750     e0b
cs1             0/55           175       R            BES-53248   0/55
cs1             0/56           175       R            BES-53248   0/56
```

20. Display information about the discovered network devices in your cluster:

    `network device-discovery show -protocol cdp`

```
cluster1::*> network device-discovery show -protocol cdp
Node/      Local  Discovered
Protocol   Port   Device (LLDP: ChassisID)  Interface       Platform
-----------  ------  ------------------------  ----------------
----------------
node2       /cdp
            e0a    cs1                        0/2             BES-53248
            e0b    cs2                        0/2             BES-53248
node1       /cdp
            e0a    cs1                        0/1             BES-53248
            e0b    cs2                        0/1             BES-53248

4 entries were displayed.
```

21. Verify that the settings are disabled:

```
network options switchless-cluster show
```

> ℹ️ It might take several minutes for the command to complete. Wait for the '3 minute lifetime to expire' announcement.

The `false` output in the following example shows that the configuration settings are disabled:

```
cluster1::*> network options switchless-cluster show
Enable Switchless Cluster: false
```

22. Verify the status of the node members in the cluster:

```
cluster show
```

The following example shows information about the health and eligibility of the nodes in the cluster:

```
cluster1::*> cluster show

Node                    Health  Eligibility   Epsilon
--------------------    ------- ------------  --------
node1                   true    true          false
node2                   true    true          false
```

23. Ensure that the cluster network has full connectivity using the command:

```
cluster ping-cluster -node node-name
```

```
cluster1::*> cluster ping-cluster -node local

Host is node2
Getting addresses from network interface table...
Cluster node1_clus1 192.168.168.26 node1 e0a
Cluster node1_clus2 192.168.168.27 node1 e0b
Cluster node2_clus1 192.168.168.28 node2 e0a
Cluster node2_clus2 192.168.168.29 node2 e0b
Local = 192.168.168.28 192.168.168.29
Remote = 192.168.168.26 192.168.168.27
Cluster Vserver Id = 4294967293
Ping status:
....
Basic connectivity succeeds on 4 path(s)
Basic connectivity fails on 0 path(s)
................
Detected 1500 byte MTU on 4 path(s):
    Local 192.168.168.28 to Remote 192.168.168.26
    Local 192.168.168.28 to Remote 192.168.168.27
    Local 192.168.168.29 to Remote 192.168.168.26
    Local 192.168.168.29 to Remote 192.168.168.27
Larger than PMTU communication succeeds on 4 path(s)
RPC status:
2 paths up, 0 paths down (tcp check)
2 paths up, 0 paths down (udp check)
```

24. Change the privilege level back to admin:

```
set -privilege admin
```

25. If you suppressed automatic case creation, reenable it by invoking an AutoSupport message:

```
system node autosupport invoke -node * -type all -message MAINT=END
```

```
cluster1::*> system node autosupport invoke -node \* -type all -message
MAINT=END
```

After you finish

See *Configuring the cluster switch log collection feature* in the Switch Setup and Configuration Guide for Broadcom-supported BES-53248 switches for the steps required to enable cluster health switch log collection used for collecting switch-related log files.
